Education

Georgia Institute of Technology — Expected Graduation: June 2028
Master of Science in Computer Science — Atlanta, Georgia

Florida International University — Expected Graduation: December 2026
Bachelor of Science in Computer Science, Minor in Math, GPA: 4.0 — Miami, Florida

- **Relevant Coursework:** Data Structures, Algorithms, Database Systems, AI, Machine Learning, Data Mining

Experience

Software Engineer Intern — June 2026 – Present
Assurant — Miami, Florida

- **Onboarded Kyriba into an enterprise multi-vendor .NET payment gateway across 6 environments** by building a typed C# settings model with Azure Key Vault resolution via managed identity, eliminating all secret-in-config risks.
- **Reduced OAuth2 token round-trips by 95%+** by implementing a client-credentials auth layer with distributed caching and refresh-before-expiry, backed by **9 unit tests**, cutting auth overhead on every third-party treasury API call.
- **Enabled automated ACH/wire disbursements on a new treasury rail** by architecting idempotent bank-account tokenization with deterministic reference codes and 409-conflict recovery, backed by **20 unit tests**.

Software Engineer (Co-op) — August 2025 – May 2026
FEAM Aero — Miami, Florida

- **Improved workflow efficiency by 30% for 1,500+ employees** by developing billing and business rules modules in React/ JavaScript, expanding the platform beyond mechanical workflows to billing, operations, and customer management departments.
- **Replaced a legacy .NET/C# platform** with a React + Flask system, cutting search latency from **20+ seconds to 3 seconds** via indexed queries, **driving company-wide adoption within 6 months.**
- **Increased deployment frequency from bi-weekly to every 3 days** by building reusable component libraries, **30+ Python unit tests**, and automated **CI/CD pipelines** in Azure DevOps for a **6+ person team**.

Software Engineer Intern — May 2025 – August 2025
FEAM Aero — Miami, Florida

- **Compressed mechanic work order processing from 2+ hours to under 5 minutes** by building a full-stack digitization system using React, Flask, and SQL, replacing manual paper-based workflows.
- **Accelerated load time from 5 seconds to under 1 second** by delivering a responsive React interface with real-time search and validation, enabling near-instant access for mechanics across all shifts.
- **Cut billing document processing from 2+ minutes to 20 seconds** by developing an automated PDF generator for multiple mechanic forms, streamlining invoice creation for aircraft maintenance operations.

Projects

ArchiTech | *Google ADK, FastAPI, Gemini 2.0, React, PostgreSQL* — November 2025

- **Won Best Use of AI with Cloudflare at SharkByte Hackathon** by building a multi-agent system with **4-phase conversation flow** that generates project roadmaps in **under 10 seconds**.
- **Led a 3-person team to cut project scoping from days to under 10 minutes** by architecting a ReactFlow + FastAPI pipeline that generates full specifications through **8-15 AI-driven discovery questions**.

AI Agent Translation Service | *Google Cloud ADK, FastAPI, Gemini 2.0, Python* — September 2025

- **Placed top 10 out of 245 teams at ShellHacks** by building a multi-agent AI translation system achieving **30% higher semantic accuracy** than Google Translate using transformer models.
- **Cut professional translation time from days to under 10 minutes per language** by architecting a **4-stage pipeline** (detection, parallel translation, quality review, refinement) using Google Cloud ADK agents.
- **Scaled throughput to 100+ items across 15+ languages** by building a FastAPI backend with async session management and dynamically-scaling parallel agent execution, eliminating manual bottlenecks.

GatherU | *Django, React, PostgreSQL* — January 2025 – April 2025

- **Delivered a full-stack event management platform for 500+ university organizations** within **9 agile sprints** by leading the React frontend and Django REST API on a **10-person engineering team**.
- **Built a collaborative filtering recommendation engine** analyzing user attendance patterns to surface personalized event recommendations, eliminating manual data entry by automating imports of **10+ weekly events** via a Selenium scraper.

Leadership

Director of Technology — January 2026 – Present
INIT FIU — Miami, Florida

- **Shipped a Notion-embedded content system for ShellHacks 2026** by building a dynamic iFrame integration in React + TypeScript, enabling real-time content updates for a hackathon serving **1,400+ annual participants**.
- **Eliminated unbounded file storage growth** by engineering a per-user rate limiter in **Go/Chi** that caps submissions at **5 uploads**, reducing S3 write volume and shielding the platform from spam-driven cost spikes.

Technical Skills

- **Languages:** Python, Java, JavaScript, TypeScript, Go, C, HTML, CSS, PostgreSQL, MongoDB, SQLite, SQL Server, C#
- **Frameworks & Libraries:** React, Node.js, Express, Flask, Django, FastAPI, Tailwind CSS
- **Tools:** Git, GitHub, Docker, Azure DevOps, CI/CD, Linux, Agile, Figma, Google ADK, VS Code, Visual Studio
